1. What is the purpose of the "Data/Model" view in Power BI?

1. Data View

- **What it shows:**
  The **Data view** displays the **tables, columns, and data** imported into your Power BI model in a table-like format.
- **Key uses:**
  - Inspect your data after loading it.
  - Check for data quality issues (blanks, errors).
  - Create **calculated columns** and **measures** using DAX.
  - View data transformations applied from Power Query.

2. Model View

- **What it shows:**
  The **Model view** displays the **relationships** between your tables visually.
- **Key uses:**
  - Define and manage relationships between tables (one-to-many, many-to-one).
  - Set cardinality and cross-filtering directions.
  - Organise tables into display folders for clarity.
  - Manage hidden fields and table properties.
  - Define hierarchies for your visuals.
